Avlite Customer Testimonials

"I am pleased to inform you that the windsock light we purchased and installed at Louth last July has not given one ounce of trouble since it was installed."

Les Harding, Services Technical Officer, Bourke Shire Council

"I would recommend that you consider Avlite as a possible source for your lighting needs. I have had outstanding success using many of their lighting systems. Their factory representatives have been available 24/7 for any lighting problems that needed solving. I have responsibilities for maintaining four army airfields. You can not go wrong in using them! Also, on a more important note, Avlite is a better light, is less expensive, the shipping is less, and most importantly, Avlite ensures they get here when they say they will...It will make your airfield maintenance life a lot easier."

Airfield Safety Officer, Speicher AAF , US Army, Iraq

"The lights [AV70] are working great. They are a significant improvement to our current taxiway lighting system providing bright, clear maintenance free lighting. The tower, pilots, ground crew and operations staff are pleased with their operation during the first 6 months"

Morland Williams, Mechanical Engineer, Grantley Adams International Airport, Barbados

[re: installation of 440 units of AV70 lights and Avlite stake mount systems]

"I also wanted to let you know I took a tour out to the ramp where the lights are being installed, and I got a lot of positive feedback! The project OIC said that they had no trouble installing them, and the whole area looks great at night! He also said that some of the end users were impressed as well. We appreciate getting such a strong product especially with the great support that came along with it."

SrA, USAF, Contracting Officer, Afghanistan

"As The Prince Charles Hospital is the heart specialist hospital in Queensland it was important that we increased our services by constructing a state of the art helipad to deliver better service to the Queensland public. The most impressive thing I liked about Avlite products was the quality and ease of installation."

Michael Maas, Fire Protection & Security Services, Prince Charles Hospital, Australia

[in reference to feedback on the AV70 taxiway lights installed at Grantley Adams International Airport]

"All good reports. They are working beautifully."

Airfield Engineer, Grantley Adams International Airport, Barbados

"The Runway Lights are awesome. They look phenomenal and everyone here is very impressed with the way they look and their capability. I am glad they had good things to say. The lights work magnificently."

US DoD Air Base Middle East

"...As the airfield lighting tech, I can say that I am impressed with your products thus far. We are using your [Avlite] solar sign lights to light the airfield signs, and while I was skeptical at first; they are a very positive addition to our runway. I'm very impressed with their quality and effectiveness."

Avlite Customer Testimonials

"Thank you again for all your help it's been great conversing back and forth to make this happen. This product is definitely going to make flight safety here at [location removed] even better."

447 EOSS/OSAA, Airfield Manager

"Thanks for the quick response on this. You guys are awesome. I should have more info for you in the next 24-48 hours."

SrA, USAF, Contracting Officer, Afghanistan

"...not sure if you remember providing lights for the 1-17th CAV in Iraq, I was the S4 at the time. I know you provided outstanding support during our deployment years ago."

MSG, USA - TF Pegasus S4 NCOIC

"Thanks for the continued assistance to the Soldiers in Iraq."

Senior ATS Systems Maintenance NCOIC, 64th TAOG, C3 Air, Iraq

"I do appreciate all of your efforts supporting us here in the AOR. A lot of what we do relies on the support of the civilian sector to make us efficient and safe in our operations."

MSgt, USAF - Airfield Manager

[re: After a period of more than nine months evaluating the AV70 model taxiway edge lights]

"We have had great success with the self-contained LED light units."

Jim Patterson, Project Manager, FAA Technical Center

"The lights remain set up on runway 18/36 and have been exposed to the elements. Even during periods of reduced visibility due to overcast and drizzle the lights have exceeded our minimum requirements for emergency runway lighting."

Roger Rudduck, Senior Base Pilot, Royal Flying Doctor Service, Charleville Base

"With reference to the solar lights that are being used at the Coen Airport for runway lights. I find them exceptionally good and reasonably hassle free in times of bad weather and poor sunlight conditions. More over it is what the pilots think. We are frequently used by the Royal Flying Doctor Service and they tell me that they are very good and can be seen from the air as far out as thirty kilometers even on very moonlight nights. I myself would have no hesitation in recommending these lights for runway use on rural airports."

W.H. Rofe, Airport Manager, Coen Airfield

"The solar-powered LED lights are significantly better than the battery powered lights previously used due to better visibility."

Jerry Haskins, Managing Director, Aus West Airlines, Rio Tinto Mine Site WA
