

# Solar Aviation Light AV-70 & AV-70-HI Avlite

## Compliance

- FAA L861T, Barricade AC 150/5370-2F
- ICAO Annex 14, Volume 1, 'Aerodrome Design and Operations'

## Applications

- ICAO and FAA Compliant.
- Runway threshold/end.
- Runway edge light.
- Taxiway edge light.

## Features

- Cost Effective
  - Solar powered.
  - No running costs.
  - Low ongoing maintenance costs.
- Easy Install
  - No trenching of cables.
  - No mains power.
- Reliable
  - No bulbs blown – ever.
  - Latest LED technology.
  - No moving parts.
- High Performance
  - Integrate into an Avlite runway lighting system.
  - Dusk-to-dawn or on demand operation.
- Optional Add Ons
  - Infrared output.
  - Radio control.
  - Mounting solutions.

The solar powered AV-70 is a field-proven aviation light that offers enormous benefits over traditional battery and hard-wired aviation lights, including low maintenance and no underground wiring.

These completely self-contained LED lights are designed to suit a range of aviation and general applications, including emergency airstrip, caution, taxiway, and threshold lighting.

The unit has two high-performance solar modules mounted within the lens, that maximize solar collection and provide reliable operation in a range of environmental conditions.

The focal plane of the light is designed to provide a vertical divergence of between 0 to +7°, and the user-replaceable battery ensures a service life of up to 12 years.

### AV-70

The AV-70 is made from tough, durable UV stabilized LEXAN® polycarbonate, and incorporates an internal photodiode for automatic night activation once the ambient light threshold drops sufficiently.

Completely self-contained and able to be installed in minutes, the AV-70 is the preferred choice for marking of remote airfields.

### AV-70-HI

The AV-70-HI is a high intensity version of the AV-70 and is ideal for use in high sunlight areas.

### Optional Radio Control

The AV-70-RF is a radio-controlled version of the AV-70, which can be used in conjunction with a PALC or simple handheld controller. Users can wirelessly control ON/OFF functions, adjust light intensities or switch between visual and IR (tactical) operational modes if fitted.
